(a) accuracy vs shots
test accuracy
0.9
0.8
0.7
0.6
0.5
100
1,000
10,000
∞
shots per fidelity
Nyström m=20
Nyström m=60
Nyström m=120
exact kernel
(b) kernel error vs shots
$\|K - \hat{K}\|_F / \|K\|_F$
10^0
10^{-1}
10^{-2}
100
1,000
10,000
∞
shots per fidelity
(c) jitter / normalisation
test accuracy
0.85
0.80
0.75
0.70
0.65
10^{-5}
10^{-3}
10^{-1}
jitter ε (S = 1,000 shots)
(c): pseudo-inverse of W_ε, S = 1,000 shots
m=20
m=60
m=120
m=20 (normalised)
m=60 (normalised)
m=120 (normalised)
